

Assuring deliverers of training in the nuclear sector

The National
Skills Academy
NUCLEAR

www.nefassured.org

What is it?

NEF Assured (Nuclear) is the industry specific standard for assuring deliverers of training in the nuclear sector.

The standard has been specifically developed to assure the quality of training that is delivered 'in-house' by nuclear organisations. This outcome-focused standard helps organisations operating in the nuclear sector to enhance their approach to training. It recognises the need for continuous improvement and for training to impact directly on business objectives.

NEF Assured (Nuclear) provides a highly valuable, independent validation of your organisation's approach to training which is recognised by the National Skills Academy Nuclear.

The standard highlights performance in six areas – strategy and planning, engagement, design and delivery, innovation, standards, and impact.

What are the benefits?

For organisations that meet the standard, there are many benefits:

It helps achieve business objectives...

The standard is geared towards ensuring that an organisation's investment in training impacts directly on business objectives and performance.

It stretches your organisation...

The standard stretches an organisation's commitment to delivering high quality training and to improving its approach.

It enables benchmarking...

The standard offers a cost effective means to establish a high degree of consistency in an organisation's training and to benchmark their approach to training with others.

It ensures training is recognised...

The standard allows your organisation's in house training to be recorded on the Nuclear Skills Passport.

What does it involve?

The process involves an independent validation of your organisation's own assessment of its capability to deliver training which meets organisational needs and nuclear sector standards.

Completing your assessment and collating evidence to support your submission could not be easier with our dedicated website and online forms guiding you through the process. One of our Advisers will support through the process, review your submission with you and confirm the evidence which supports your submission through a site visit.

Who can apply?

The NEF Assured (Nuclear) standard is applicable for Site Licensed Companies and other organisations operating in the nuclear sector, which hold an existing quality standard such as ISO 9001 and Investors in People.
